minimal
notes, one stateless Process
data
datastores, Vault, backups
Platform Intent and
the pinned inputs
edge
proxies, shared Middlewares
Pipeline.render
minimal and data, as one composed union
Pipeline.render
edge
rendered trees
one file per Deliverable, at the path the resolution planned
Level 2: byte parity
ParityTest, RenderedTreeTest: each
file equal to its committed one,
no file missing or extra
Level 3: schema and profile
kubeconform 0.6.7, -strict;
Pod Security restricted on
every pod template
Level 4: server dry run
kubectl apply --dry-run=server,
per Project, on a throwaway
k3s cluster in Docker
committed rendered/ trees
of minimal, data and edge
Kubernetes 1.36.5 schemas, CRD
catalogue at one commit, Client schema
k3s v1.36.5, the version of
production's control plane;
CRDs and namespaces applied first
